These native plant providers  
DO NOT USE neonicotinoids  
on their plants—systemic  
chemicals that kill insects  
and are known to persist in  
all plant tissues, which can  
harm bees, hummingbirds,  
butterflies, moths, and  
other pollinators that visit  
the blooms for nectar and  
pollen. Always ask about  
this practice when shopping  
anywhere for native plants.

This directory was compiled  
by Wild Ones Smoky  
Mountains Chapter. To learn  
more about our mission or
