tennesseesnaturescapes.com

Native seed should be regionally sourced for best results. We suggest that you purchase from our most local grower of 100% viable, live native seed:

Roundstone Native Seed (Upton, KY)

9764 Raider Hollow Road Upton, KY
(270) 531-3034 or sales@roundstoneseed.com
www.roundstoneseed.com

These native plant providers DO NOT USE neonicotinoids on their plants—systemic chemicals that kill insects and are known to persist in all plant tissues, which can harm bees, hummingbirds, butterflies, moths, and other pollinators that visit the blooms for nectar and pollen. Always ask about this practice when shopping anywhere for native plants.

This directory was compiled by Wild Ones Smoky Mountains Chapter. To learn more about our mission or get involved, scan below or visit us at smokymountains.wildones.org.
